

Cloud Based Telephony (VoIP)

Get ready for the move to a new UK digital network.

In 2025 the UK will switch off its PSTN & ISDN network. Consumers and businesses using traditional landlines and broadband will need to move to the new UK digital network; voice calls will be delivered using the same infrastructure as data and use Voice over Internet Protocol (VoIP) technology.

To ensure your services are not disrupted you will need to move to a digital line which supports VoIP and provides improved call quality, fewer faults and is environment friendly.

Telephony Features

Telephony is changing from the traditional model where there were a host of upfront costs and you needed an on-premise phone system. Going forward, it is easier to control through a cloud-based system, managed by us and prices are based on a per-user cost, charged monthly. Whether you are an SME or large enterprise, we can accommodate for your precise requirements.

Telephone system features:

- ✓ Physical phones
- ✓ Call centre environment
- ✓ Small office environment
- ✓ Call recording
- ✓ Auto attendance
- ✓ Integration into 3rd party software such as your CRM software
- ✓ Soft phones
- ✓ Factory environment
- ✓ App integrations
- ✓ Call conferencing
- ✓ Call routing / forwarding

What this means for you

We can help you identify which features your business requires, then scope and build your business a tailored telephony plan. You will still have the flexibility to choose from different call packages and hardware types.

Call ASL on **0345 862 0350** to see how we can help you move to a digital line.
